

Keygold Recovery Quickstart Guide

STEP ONE – Put the CD in the CD drive and the USB Key into a USB port. Turn your computer off and on.

STEP TWO – Input your username in the grey line. This can be any name you choose. Press ENTER.

STEP THREE – Choose the drive you will recover your files from – Keygold Recovery will show you your choices. If you're not sure, select the first one using the SPACE bar. Then press ENTER. Note: you may have to repeat the copy process and select the other drive later if your data is not on the key when you're done.

STEP FOUR – Choose the category of the files to transfer **OR** ask Keygold to show you how many files you can transfer from each category based on the size of the key.

KEYGOLD RECOVERY IS WORKING – the time for the transfer depends on how many files you are copying.

TRANSFER COMPLETE! After the final screen, take your USB key to another computer to get the files.

STEP SIX –Put your key into the computer where you want to see your files, and pull onto that computer, or simply open them from the key.

***boot help is available on your key or on the html docs on the CD and key.**
